

2019-2020 Timothy Germ
Proficiency

Summary Information

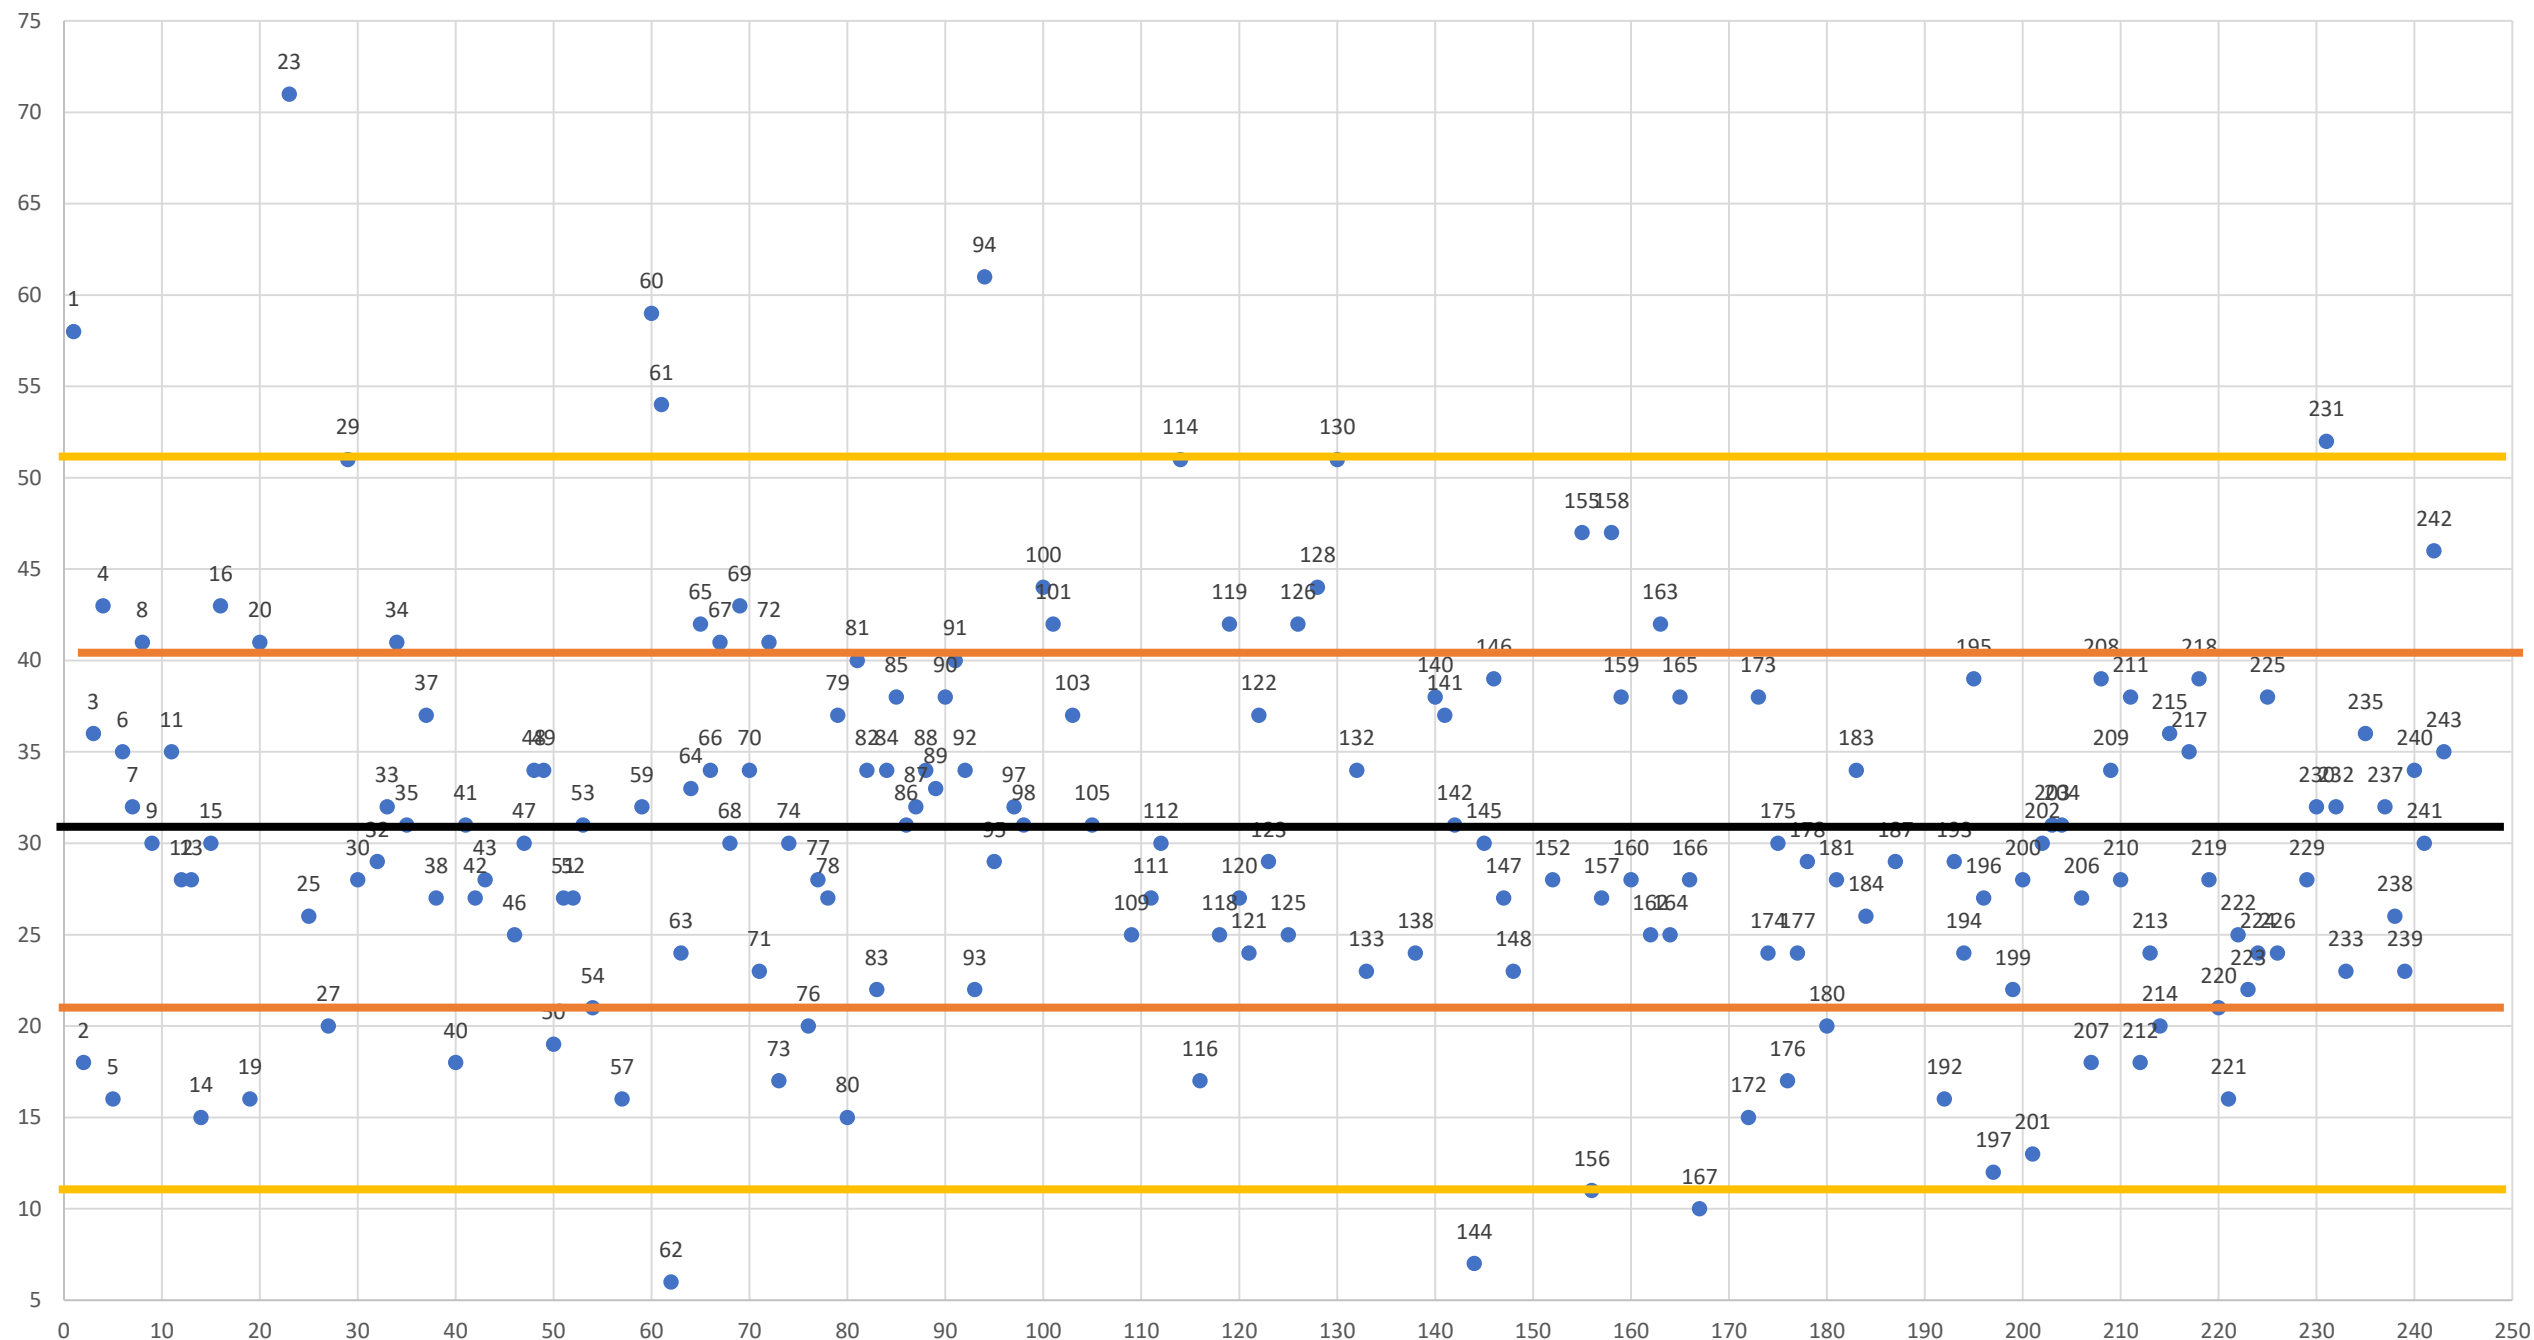

- 180 Participants
 - 6 CSAAC
 - 3 CSAG
 - 12 CSAPG
 - 16 CVT
 - 1 CSAG/CVT
 - 26 Not Certified
 - 97 RST
 - 5 RST/CSAAC
 - 14 RST/CSAPG

Summary Information

- No idea where seed was obtained from or the original germination
- No idea how seed was stored prior to being prepared to send out.
- Timothy is a crop that can be used to check for phytotoxicity
- Average germination was a 31%
- 132 Participants were within one standard deviation
- 39 Participants were within two standard deviations
- 9 Participants were outside two standard deviations

Germination %

Temperature Comparison

Temperature	Average Germination	Number of participants
15-25C	32.39%	118
20-25C	31.50%	2
20-30C	27.20%	60

Media Comparison

Media	Average Germination	Number of Participants
P	28.37%	73
TB	32.21%	107
